

Global Navigation

Best Practice: How to Implement Global Navigation

Global navigation is a region of the graphical user interface reserved for buttons, links, search bars, or any other design element affording movement from one set of content to another. This region appears identically across all different pages so as to provide a consistent means of traveling to anywhere in the application or website. A site's global navigation acts as its central nervous system—at least, to the user's eye—and the main line from which users can see, at a glance, other places to visit. To implement global navigation, these are the steps to take:

- 1** First, **establish your groups of content**; if the number of categories exceeds twelve, you might be better off combining global navigation with another user interface design pattern, such as a mega dropdown menu.
- 2** **Assign each of the groups of content a fitting title** (e.g., from the top-level navigation bar above: 'Your Amazon.com', 'Today's Deals', 'Gift Cards & Registry', 'Sell', and 'Help').
- 3** **Arrange these category titles in a logical order.** For each group of categories, there likely will be an appropriate order, but the first option is usually the homepage, as this represents the first tier in the whole user interface. When used in combination with tabs, top-level navigation bars serve as the second tier of the user interface. In these instances, the first tab should be used to take the user back to the homepage.

- 4 **Implement the same top-level navigation bar in all regions of the user interface.** Then, link each title to the appropriate contents, so when the users click it, they are navigated directly to the associated information.
- 5 **Inform the users of their current position** by changing the appearance of the individual category label. In the WordPress example below, the color of the selected category label changes from light white to blue, while all other options remain the same color.

- 6 When you're using a hyperlinked logo or name in your global navigation, it does not expressly state that it also operates as a homepage link. Therefore, you should **include a number of other small touches to help the user identify this functionality**. Firstly, you can use a simple tooltip to display the word 'homepage'. This is not commonly implemented, but it would help novice users determine that this facility is afforded. Secondly, changing the appearance of the cursor when users hover over the hyperlinked logo or name shows them they can click on it.

Do you want to learn more?

Learn how to use this template to your best advantage in our online course [UI Design Patterns for Successful Software](#). Sign up for it today and learn how you can create user interfaces that work just right if you haven't already started the course.

UI Design Patterns for Successful Software

■□□ Beginner course

User interface (UI) design patterns can be a designer's best friend, allowing you to build excellent user experiences with structure and speed. When used in the wrong way, however, they can quickly lead to experiences that confuse your users... and no-one wants that! Our course [UI Design Patterns for Successful Software](#) will equip you with the knowledge required to master UI design patterns and secure them as one of the best attributes in your designer's toolkit. You'll be guided through best practices relating to content organization, navigation, data entry, and social integration—all with detailed templates that you can use in your daily work. You'll also analyze and critique popular websites to see how the best of the best utilize UI design patterns to achieve great UX design. If you found this template useful, then this course is a treasure trove of resources and guidance that will continue to enhance your knowledge of UI design.

About the Interaction Design Foundation

INTERACTION DESIGN
FOUNDATION

With over 66,000 alumni, the Interaction Design Foundation is the biggest design school globally. Industry leaders such as IBM and Adobe train their teams with our courses, and universities such as MIT and the University of Cambridge include our courses in their curricula. Our online courses are taught by industry experts and cover the entire spectrum of UX design from beginner to advanced. We give you industry-recognized course certificates to advance your career. Since 2002, we've put together the world's biggest and most authoritative library of open-source UX Design literature created by such noted authors as Don Norman and Clayton Christensen.
